FIWARE Lab Cloud Hosting: Overview and Architecture

FIWARE Lab Cloud Hosting

FIWARE Lab Cloud Hosting

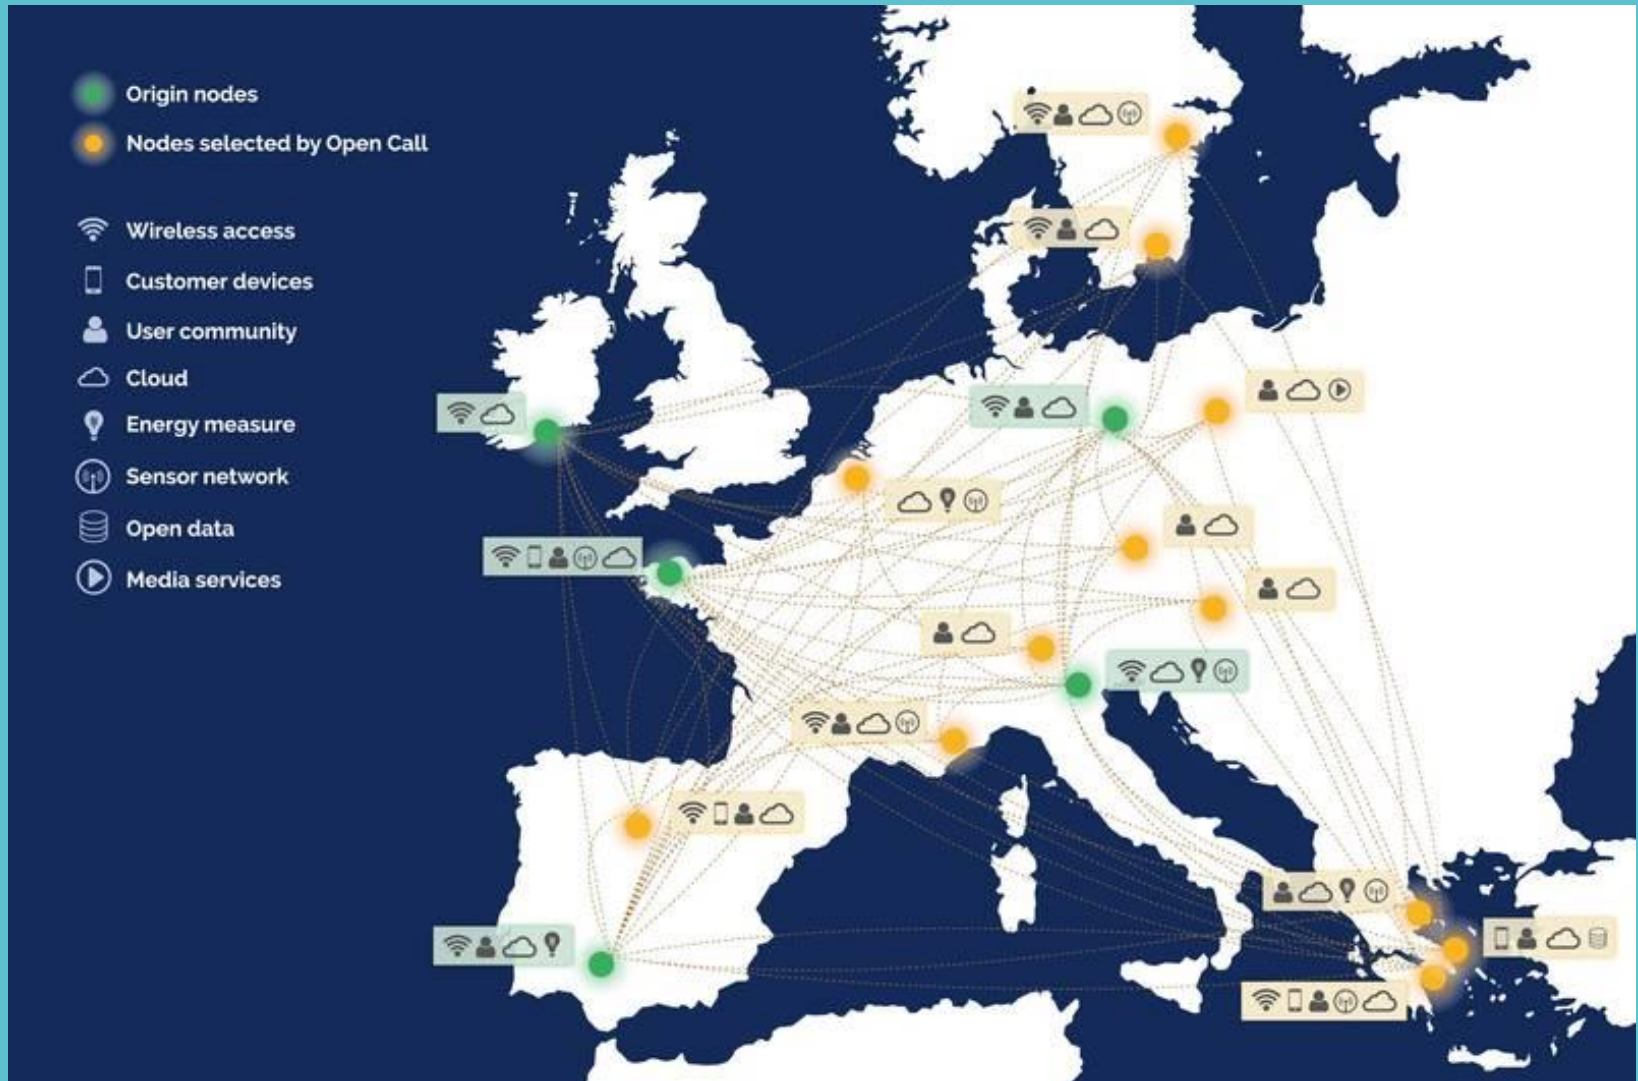

Summary

- **Account:** Manages identity and organizations; provides authentication and authorization for other services (OpenStack Keystone).
- **Compute:** Manages the lifecycle of compute instances. Responsibilities include spawning, scheduling and decommissioning of VMs (OpenStack Nova).
- **Network:** Enable Network-Connectivity-as-a-Service for other services, e.g. Compute, (OpenStack Neutron).
- **Storage:**
 - Persistent block storage for running compute instances (OpenStack Cinder).
 - Stores and retrieves arbitrary unstructured data object and provide storage for other services, e.g. Image, (OpenStack Swift).

Summary

- **Image:** Stores and retrieves VM disk images used by compute (OpenStack Glance).
- **Monitoring:** Monitoring information about VMs
- **SDC:** Deploying Software in VMs
- **PaaS Manager**
 - Working with regions
 - Creating Tiers and deploying Blueprints

FIWARE Lab Account Categories

Asking for a community account upgrade

The screenshot shows the FIWARE Lab website interface. At the top, there is a navigation bar with the FIWARE Lab logo and links for Cloud, Store, Mashup, Data, Account, and Help&info. Below this, a secondary navigation bar highlights 'Cloud', 'Store', 'Mashup', and 'Account'. The main content area features a video player titled 'FIWARE Cloud Blueprint templates' with the subtitle 'Cloud screencast Blueprint Templates'. The video player includes the FIWARE logo, the text 'OPEN APIs FOR OPEN MINDS', and a play button. Below the video player are three tabs: 'Blueprints', 'Instances', and 'Object Storage'. On the right side, there is a sidebar with social media icons and several menu items: 'Need Help?' (with a 'Send us a message' link), 'Our GEs' (with a 'See our Catalogue' link), 'FIWARE nodes' (with a 'Learn about FIWARE Lab' link), and 'More information' (with a 'Visit our eLearning Platform' link). At the bottom of the sidebar, a button labeled 'Community Account upgrade' is circled in red. Below the sidebar, there is a 'Tweets by @Fiware' section.

Asking for a community account upgrade

Community Account Request

i Fill in the data to request a Community Account, you will receive a confirmation email at each step of the process from communityaccount@fiware.org email address. If not please check your SPAM inbox or contact the helpdesk: fiware-lab-help@lists.fiware.org.
In the project description, motivate why you apply for a FIWARE Lab account, describing how you plan to use FIWARE. Check <https://developer.fiware.org> for ideas!

User Full Name*
Your full name as by your ID

User Account Email*
Insert the email associated to the main representative in your project

Are you already* registered in FIWARE Lab? Yes No
Confirm that you created a main account for you project in [FIWARE Lab](#). You should be able to register a "basic" account without any issue. In case of problems, the Help Desk will support you in the creation of the account.

Company*
Department

Basic functionalities: Compute Services

FIWARE Lab Cloud Hosting: basic functionalities

- Create your keypair (private key)
- Create security group (incoming ports to VM, e.g. 22 for ssh)
- Deploy your instance
 - choice from a library of predefined images, e.g. Centos, Ubuntu, etc.
 - choice flavor of resource configuration.
 - choice security group.
 - choice keypair to ssh into VM.
 - specify configuration scripts (optional).

FIWARE Lab Cloud Hosting: basic functionalities

- Associate public IP with the instance.

Create keypair

You must create a keypair to access to the servers.

Create keypair

The screenshot shows the FIWARE Lab Security console. The main navigation bar includes 'Cloud', 'Store', 'Mashup', 'Data', 'Account', and 'Help&info'. The user is logged in as fernando.lopezaguilar@telefonica.com. The 'Security' section is active, with 'Keypairs' selected. A 'Create Keypair' dialog box is open, featuring a 'Keypair Name' input field, a 'Description' field, and a 'Create Keypair' button circled in red. The dialog also includes a 'Cancel' button and a note: '* Mandatory fields.' The background shows a sidebar with navigation options like 'Project', 'Info', 'Blueprint', 'Region', 'Compute', 'Storage', and 'Network'.

Create keypair

The screenshot shows the FIWARE Lab Security console. The 'Keypairs' tab is selected, and the 'Create Keypair' dialog box is open. The dialog has a title bar 'Create Keypair' and a close button. It contains a form with the following fields:

- Keypair Name ***: A text input field containing the value 'test'.
- Description**: A text area containing the text: 'Keypairs are ssh credentials which are injected into images when they are launched. Creating a new key pair registers the public key and downloads the private key (a .pem file). Protect and use the key as you would any normal ssh private key.'

At the bottom of the dialog, there is a note: '* Mandatory fields.' and a 'Close' button. The 'Download Keypair' button is circled in red in the original image. The background shows the console navigation menu with categories like Project, Info, Blueprint, Region (Spain2), Compute, Storage, and Network.

How to connect from Windows (I)

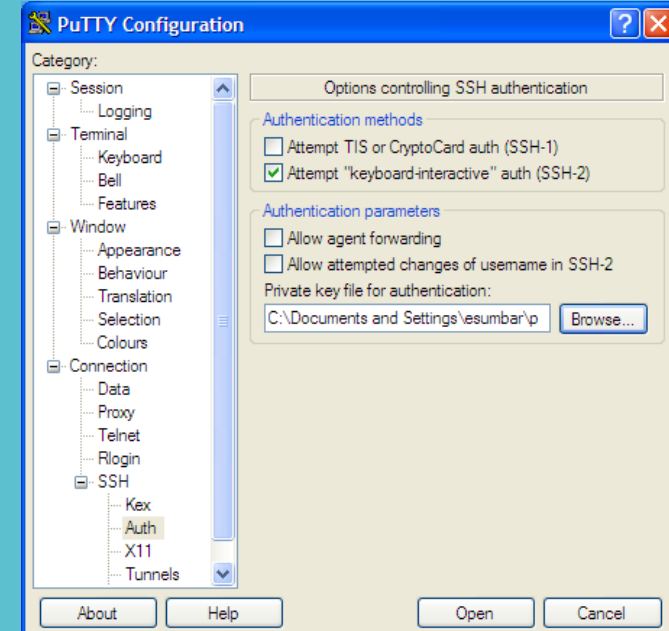

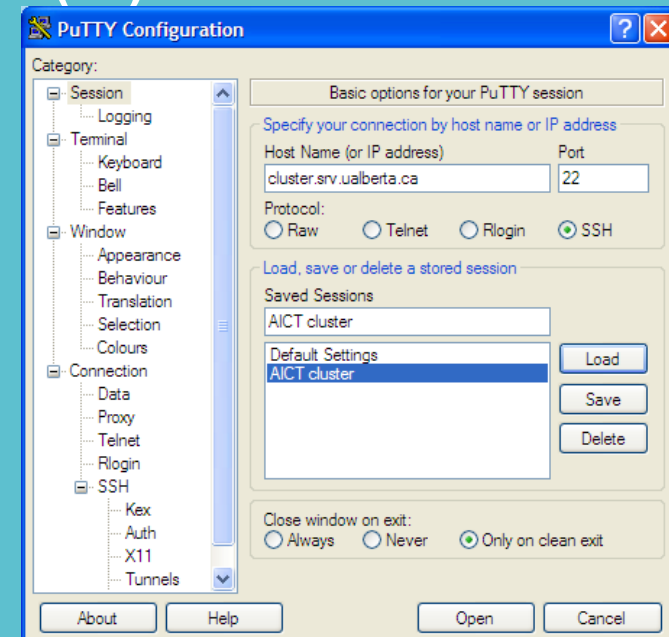

- Install PuTTY and PuTTYgen from <http://www.putty.org/>
- Convert your Keypair to PPK
 - Start PuTTYgen (e.g. From the Start menu, click All Programs > PuTTY > PuTTYgen)
 - Click Load and select the Keypair file (e.g. my_cert.pem). You'll need to display All Files (*.*) to see your Keypair.

- Click Open. And select the destination path and name of your PPK file.

How to connect from Windows (II)

- Connect to your instance
 - Start PuTTY.
 - Put the public IP of your instance (default SSH port is 22).
- Configure it to use your Keypair
 - Open the Auth submenu (Connection > SSH > Auth)
 - Select the recently generated Private key file (PPK file).

How to obtain your public key from pem file

- Secure to have the proper permissions:

```
$ chmod 600 private.pem
```

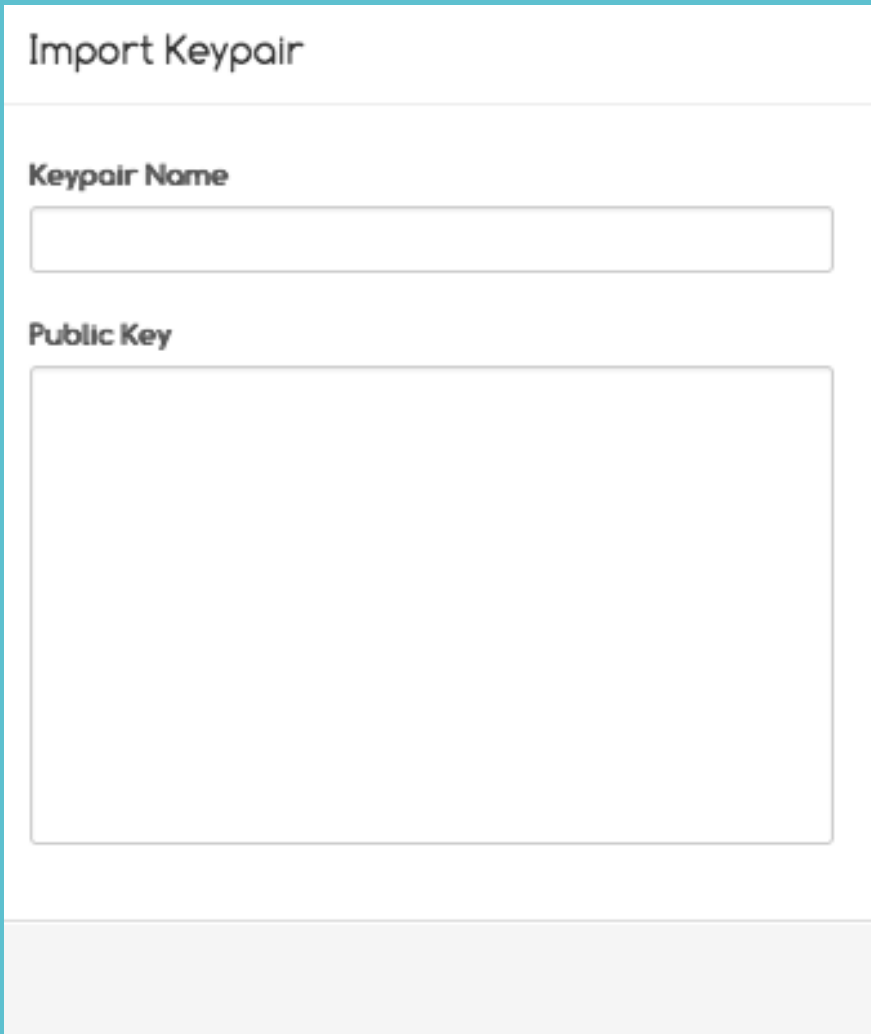

- Create the public key:

```
$ ssh-keygen -y -f private.pem >> publickey.pub
```

- Add the public key to your system

```
$ cat publickey.pub >> ~/.ssh/id_rsa.pub
```

How to import your public key into OpenStack

Import Keypair

Keypair Name

Public Key

Cancel Import Keypair

- Just go to the `.ssh` directory and execute

```
$cat ~/.ssh/id_rsa.pub
```
- Copy and Paste the content in the Public Key textarea.
- Assign a keypair name
- Press Import Keypair.

Security groups

The screenshot shows the FIWARE Lab interface for managing Security Groups. The main navigation bar includes 'Cloud', 'Store', 'Mashup', 'Data', 'Account', and 'Help&info'. The user is logged in as fernando.lopezaguilar@telefonica.com. The 'Security' section is active, with tabs for 'Floating IPs', 'Security Groups', and 'Keypairs'. A 'Create Security Group' button is visible in the top right of the Security Groups tab. A modal window titled 'Create Security Group' is open, displaying the following fields and text:

- Name ***: A text input field containing the text 'Lower case letters, numbers, underscores and hyphens.'
- Description ***: A text input field containing the text 'This field is required.'
- Description**: A section with the text 'From here you can create a new security group'.
- * Mandatory fields.**: A note at the bottom left of the modal.
- Buttons**: 'Cancel' and 'Create Security Group' buttons at the bottom right.

At the bottom of the page, there is a status bar with the text: 'Info: Connected to project Fernando Lopez cloud (ID 81528c7d7b6c4501b5d6aef72af6f201)'. The footer contains the text: '2015 © FIWARE. The use of FIWARE Lab services is subject to the acceptance of the Terms and Conditions, Privacy Policy and Cookies Policy'.

Create and edit Security Group rules

The screenshot displays the FIWARE Lab interface for managing Security Groups. The top navigation bar includes links for Cloud, Store, Mashup, Data, Account, and Help&info, along with the user profile for fernando.lopezaguilar@telefonica.com. The main content area is titled 'Security' and features three tabs: Floating IPs, Security Groups (selected), and Keypairs. A 'Create Security Group' button and an 'Actions' dropdown menu are visible. The 'Actions' menu is open, showing 'Edit Rules' and 'Delete Rules' options. The table below lists the security groups:

<input type="checkbox"/>	Name ▾	Description ▾
<input type="checkbox"/>	default	Default security group
<input checked="" type="checkbox"/>	test	This is a demo

At the bottom of the interface, a green success message reads: **Success: Security group test created.** The status 'Displaying 2 items' is shown at the bottom right of the table area.

[ubuntu@instance-test:/data$ ls
lost+found me
ubuntu@instance-test:/data$ ]
```

Object Storage: Create a container

Create Container

Container Name *

Description

A container is a storage compartment for your data and provides a way for you to organize your data. You can think of a container as a folder in Windows® or a directory in UNIX®. The primary difference between a container and these other file system concepts is that containers cannot be nested. You can, however, create an unlimited number of containers within your account. Data must be stored in a container so you must have at least one container defined in your account prior to uploading data.

* Mandatory fields.

Cancel [Create Container](#)

Upload an object into the container

Upload Object To Container: FIWARE Summit

Object Name *

File *

No se ha seleccionado ningún archivo.

Description

An object is the basic storage entity and any optional metadata that represents the files you store in the OpenStack Object Storage system. When you upload data to OpenStack Object Storage, the data is stored as-is (no compression or encryption) and consists of a location (container), the object's name, and any metadata consisting of key/value pairs.

* Mandatory fields.

Upload an object to the container

The screenshot shows the OpenStack Containers dashboard. On the left is a navigation menu with categories: Project (Fernando Lope...), Info, Blueprint (Instances, Templates), Region (Spain2), Compute (Instances, Images, Flavors, Security, Snapshots), Storage (Containers, Volumes), and Network (Networks, Routers). The main area is titled 'Containers' and features an 'Upload Object' button and an 'Actions' dropdown. Below is a table with columns 'Name' and 'Size'. One row is visible: 'malaga logo' with a size of '19.1 KB'. At the bottom right of the table area, it says 'Displaying 1 item'. A green success message at the bottom of the dashboard reads: 'Success: File malaga logo downloaded.'

<input type="checkbox"/>	Name ▾	Size ▾
<input type="checkbox"/>	malaga logo	19.1 KB

Displaying 1 item

Success: File malaga logo downloaded.

Extended functionalities: PaaS, working with Blueprints

FIWARE Lab Cloud Hosting

- Deploying components for your application.
- Create blueprint templates.
- Create Tiers on a blueprint template.

FIWARE Lab Cloud Hosting

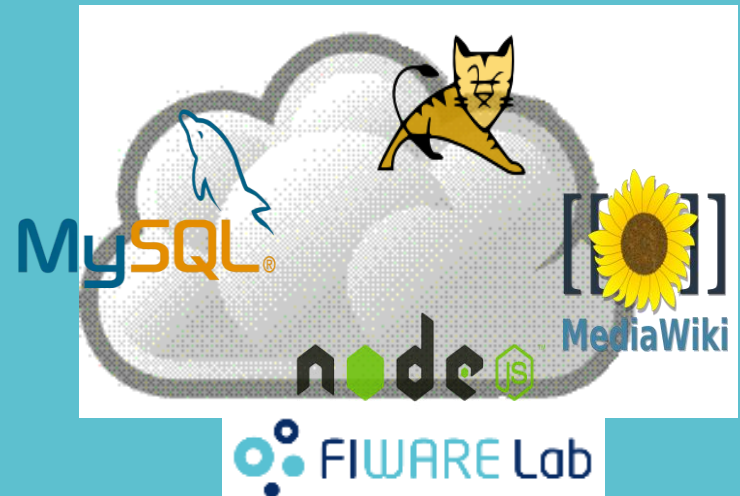

- Launch blueprint templates -> create blueprint instances
- See details of the blueprint instance
- Check the SW installed on the blueprint instance

Real scenario

- Users want to define lots of parameters.
 - Password, ports, default installation.
- Users want to install several things in the same server.
 - Tomcat + git, tomcat + java + git, ...
- Users need to deploy complex environment.
 - One server for Tomcat, another for MySQL, ...
- Some parameters are unknown before instantiate the system.

Deploying components for your application

- Deploying applications and not only Servers.
- Ad hoc installation (not template usage).
- Managing applications in Servers (install, uninstall, configure, snapshot...).
- Deploying different environments for that applications.

Deploy example

Blueprint template: fiware1

Servers: 2-5

Tier 1: Tomcat

Server: 1

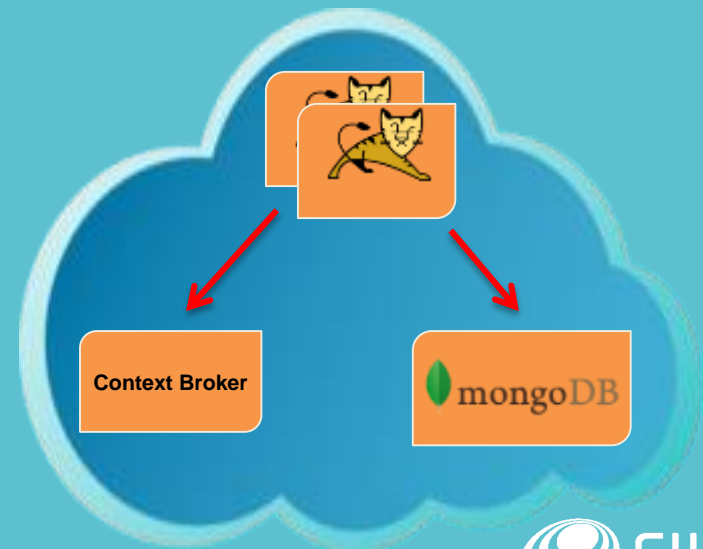

Tier 2: Context Broker

Server: 1

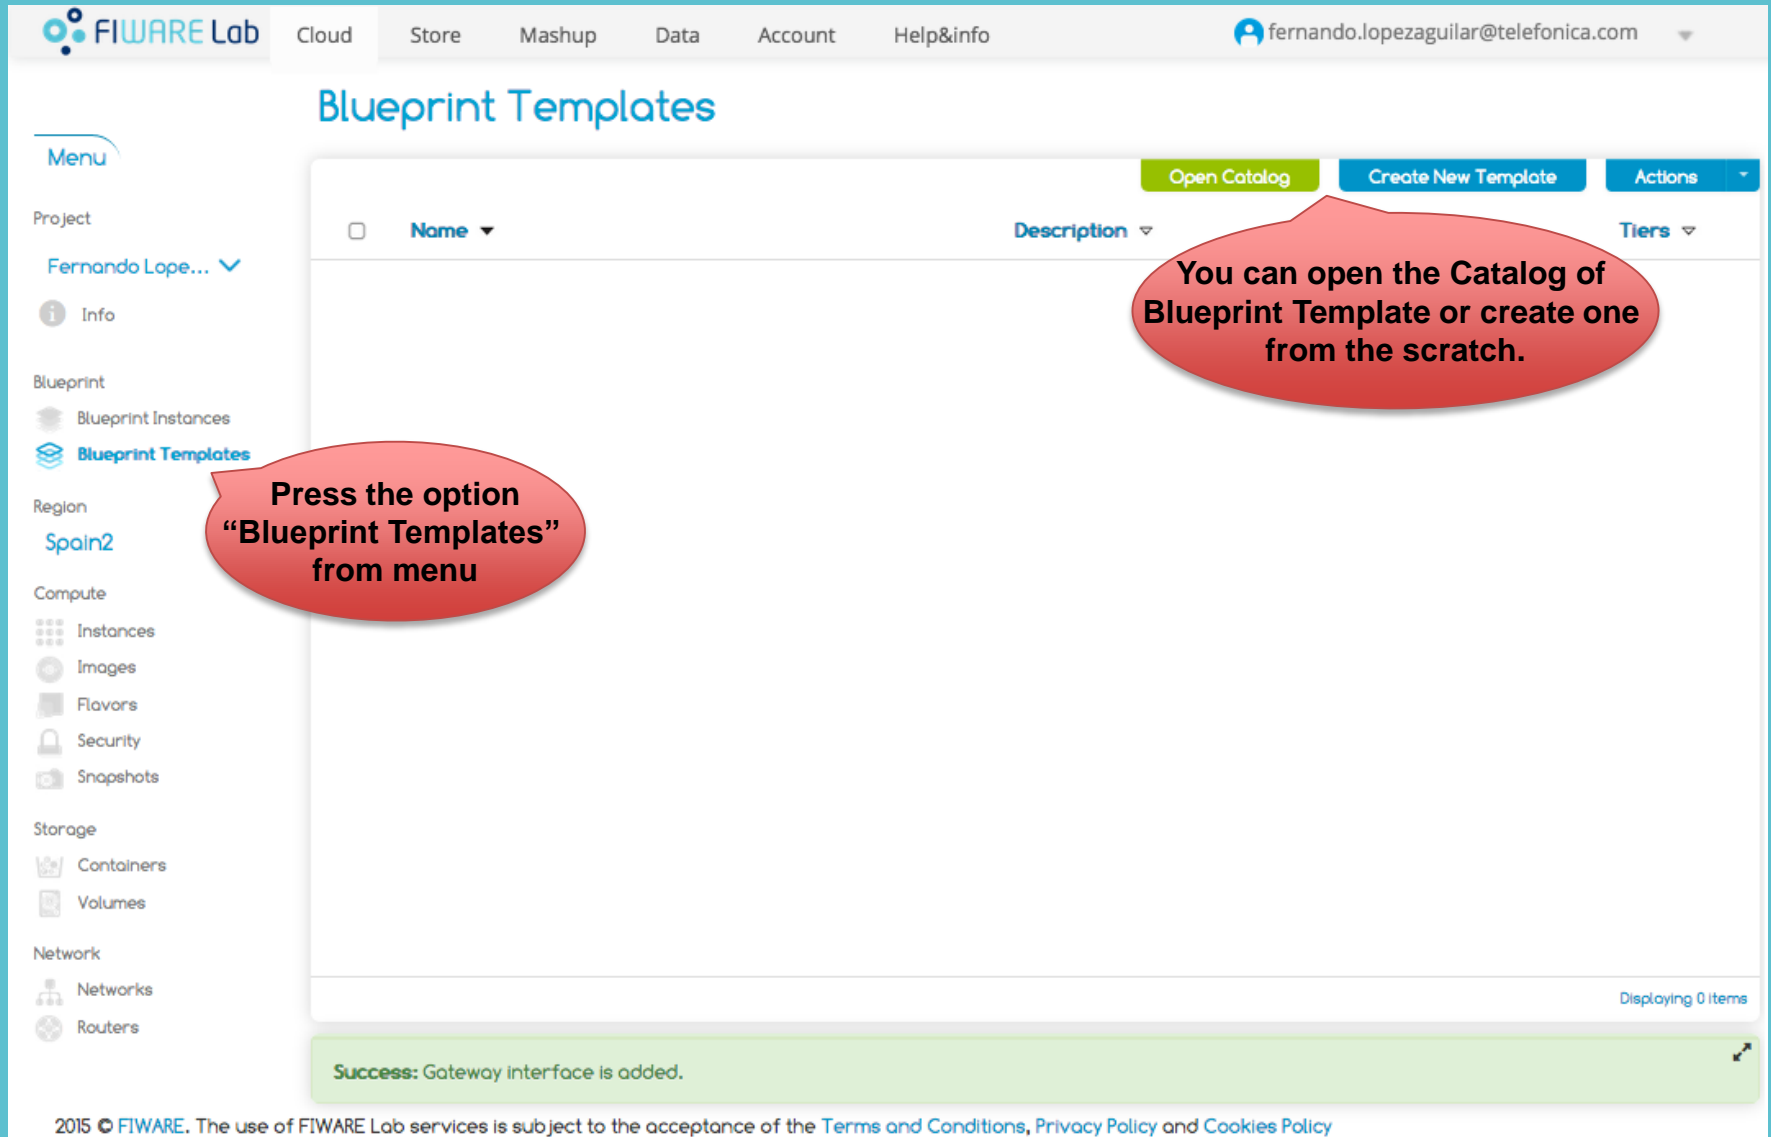

Tier 3: MongoDB

- **Blueprint Template:** platform specification to be deployed.
- **Tier:** Each kind of software and server to be deployed.
- Each Tier can be deployed in one or several **servers** (e.g. tomcat, 2-5 servers).
- **Blueprint Instance:** Deployed in the testbed.

Create a new blueprint template

The screenshot shows the 'Create Blueprint' form in the FIWARE Lab interface. The form is titled 'Create Blueprint' and has a close button in the top right corner. It contains two main sections: 'Name' and 'Description'. The 'Name' field is a text input containing 'demo-template'. The 'Description' field is a larger text area containing 'description'. A red callout bubble with white text points to the form, stating: 'You should introduce the "Name" and the "Description"'. Below the form, there is a legend indicating that fields with an asterisk are mandatory. At the bottom right of the form, there are two buttons: 'Cancel' and 'Create Blueprint'. Below the form, a green success message reads: 'Success: Gateway interface is added.' The background shows the FIWARE Lab navigation menu with categories like Project, Info, Blueprint, Region, Compute, Storage, and Network.

Add tiers

The screenshot shows the FIWARE Lab interface. The top navigation bar includes 'Cloud', 'Store', 'Mashup', 'Data', 'Account', and 'Help&info'. The user is logged in as 'fernando.lopezaguiar@telefonica.com'. The main heading is 'Blueprint Templates'. On the left, there is a 'Menu' sidebar with categories like Project, Blueprint, Region, Compute, Storage, and Network. The main content area displays a table with the following data:

<input type="checkbox"/>	Name ▾	Description ▾	Tiers ▾
<input type="checkbox"/>	demo-template	description	0

A red callout bubble is positioned over the 'demo-template' row, containing the text: **To add new Tier, press "demo-template" name.**

At the bottom of the interface, a green success message reads: **Success: Blueprint demo-template created.**

Add tiers

After press "Add Tier" you see this windows to define the servers of this tier.

Apache Tomcat

The Apache Software Foundation
<http://www.apache.org/>

If you're seeing this page via a web browser, it means you've setup Tomcat successfully. Congratulations!

As you may have guessed by now, this is the default Tomcat home page. It can be found on the local filesystem at:

```
$CATALINA_HOME/webapps/ROOT/index.html
```

where "\$CATALINA_HOME" is the root of the Tomcat installation directory. If you're seeing this page, and you don't think you should be, then you're either a user who has arrived at new installation of Tomcat, or you're an administrator who hasn't got his/her setup quite right. Providing the latter is the case, please refer to the [Tomcat Documentation](#) for more detailed setup and administration information than is found in the INSTALL file.

NOTE: For security reasons, using the manager webapp is restricted to users with certain roles such as "manager-gui". Users are defined in `$CATALINA_HOME/conf/tomcat-users.xml`.

Included with this release are a host of sample Servlets and JSPs (with associated source code), extensive documentation, and an introductory guide to developing web applications.

Tomcat mailing lists are available at the Tomcat project web site:

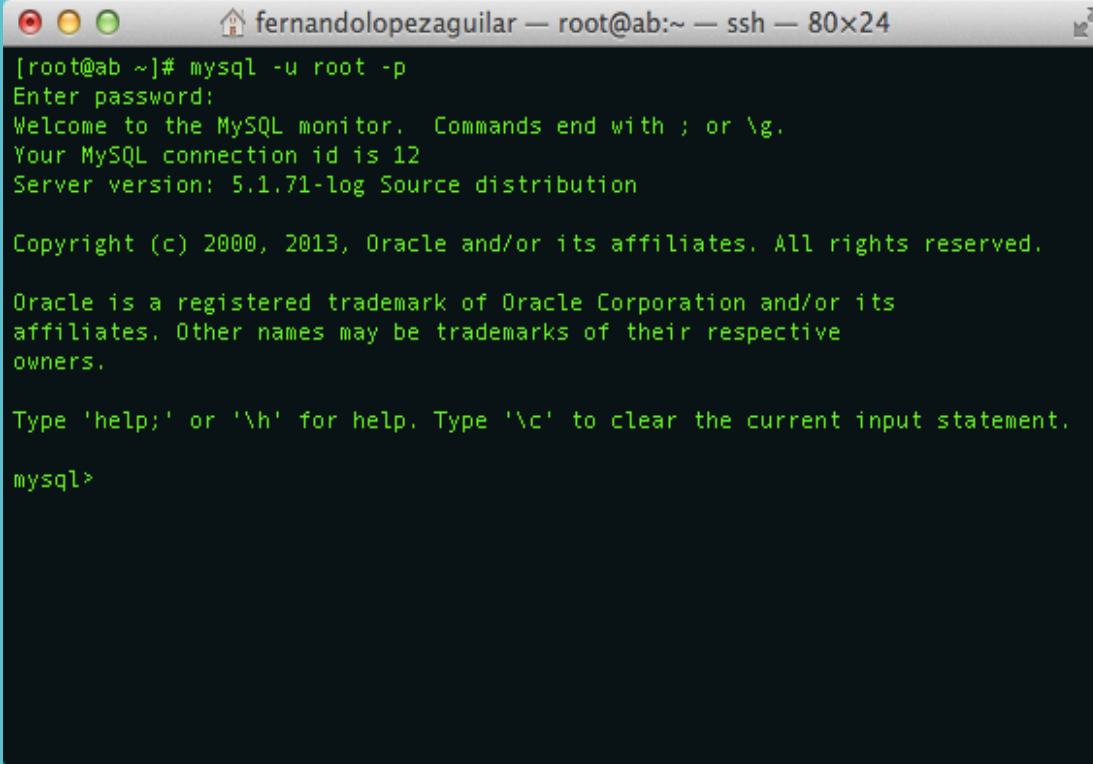

- [tomcat-users](#) for general questions related to configuring and using Tomcat
- [tomcat-dev](#) for developers working on Tomcat

Thanks for using Tomcat!

Demo

A terminal window with a dark background and light green text. The window title bar shows 'fernandolopezaguilar — root@ab:~ — ssh — 80x24'. The terminal content shows the execution of 'mysql -u root -p', the password prompt, and the MySQL welcome message. The prompt 'mysql>' is visible at the bottom.

```
[root@ab ~]# mysql -u root -p
Enter password:
Welcome to the MySQL monitor.  Commands end with ; or \g.
Your MySQL connection id is 12
