GLOBAL PARTNERS

The COVID-19 pandemic is a disruption of unknown proportions. It has altered our reality like nothing we have yet seen. This disruption instantly became a global trauma: our routine was brought to a halt and every aspect of our lives was immediately changed. From people free to travel, congregate, socialize and work, we became people under curfew, travel restrictions, social distancing and unemployment.

The health crisis is creating a new playing field and as we reach the end of 2020, we need to rethink our Cities. Cities that are more resilient, healthy, responsive, flexible, collaborative, circular and human centered.

Technology and Innovation are two powerful tools that can help us transform and design the City we really want.

Welcome to the City 2030
